PROFESSIONAL SUMMARY

Backend and Full-Stack Developer experienced in building production-grade MERN applications with secure authentication, Redis caching, real-time communication using Socket.io, payment integration, and cloud deployment. Passionate about scalable backend systems, clean architecture, and software engineering best practices.

EDUCATION

Maharaja Agrasen Institute of Technology (MAIT), GGSIPU CGPA - 8.68
B.Tech in Electronics and Communication Engineering (ECE) with minor in AI/ML Nov 2022 – May 2026

EXPERIENCE

Full Stack Web Development Intern Jul 2024 – Aug 2024
Diginique TechLabs (in collaboration with iHUB DivyaSampark, IIT Roorkee) New Delhi

- Completed a project-based internship focused on full-stack web development using the MERN stack.
- Developed responsive frontend components, integrated backend APIs, and implemented application features.
- Worked on debugging, API integration, and software engineering best practices under mentor guidance.

PROJECTS

Aranya-Production-Grade MERN E-Commerce Platform (Live) | *React.js, Node, Express, MongoDB, Redis, Socket.io*

- Designed and developed a **production-grade MERN e-commerce platform** with **30+ RESTful APIs** supporting authentication, product management, payments, reviews, orders, and admin workflows.
- Implemented secure authentication using **JWT access tokens, refresh token rotation, HTTP-only cookies, role-based authorization**, OTP email verification, and password recovery.
- Integrated **Redis server-side caching** with cache invalidation to reduce repeated **MongoDB** queries and significantly improve product listing API performance.
- Built **real-time order tracking** using **Socket.io** (Implemented **WebSocket**-based real-time order tracking using Socket.io, enabling instant synchronization between admin and user dashboards), enabling instant synchronization of order status between admin and user dashboards without page refresh.
- Integrated **Razorpay, Cloudinary, Docker** (Containerized the application using Docker and Docker Compose), **Zod** validation and **Winston** logging; deployed on **Railway, Vercel, MongoDB Atlas** and **Redis Cloud**.

AI Predictive Methods for Credit Underwriting *Python, Streamlit, Sci-kit learn, Hugging Face, Machine Learning*

- Developed a machine learning pipeline for credit underwriting using classification models to predict loan approval probability.
- Built an end-to-end machine learning pipeline including data preprocessing, feature engineering, model training, evaluation, and inference.
- Integrated a Hugging Face-powered conversational assistant to explain predictions and answer loan-related queries.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), Python, C++

Frontend: React.js, HTML5, CSS3, Bootstrap

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Bcrypt

Databases: MongoDB, MySQL, SQL

Cloud / DevOps: Railway, Vercel, Redis, Socket.io, Cloudinary

Tools: Git, GitHub, Postman API Testing, Docker, basic CI/CD, MongoDB Atlas

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, API Design

AI: Machine Learning, RAG

Testing: Jest, Supertest

ACHIEVEMENTS & ADDITIONAL INFORMATION

- Certified in Full Stack Web Development (MERN) and Web Application Security (SQL Injection).
- Completed a project-based Full Stack internship with Diginique TechLabs in collaboration with iHUB DivyaSampark, IIT Roorkee.
- Participated in Google Cloud Native Tour and gained exposure to cloud-native architectures.
- Solved 70+ DSA problems on LeetCode and coding platforms.
- Interested in Backend Development, Distributed Systems, and AI-powered applications.
